

T&S Cheat/Drill Concept

1. Print Speed

- **Fast prints = Momentum**
- **Slow prints = Caution / indecision**
- **Tip:** Watch how quickly trades go off; if prints accelerate, buyers/sellers are aggressive.

2. Size

- **Large size hitting ask = Aggressive buying**
- **Large size hitting bid = Aggressive selling**
- **Tip:** Clusters of large size are significant - note where they appear (support/resistance?).

3. Price

- **Higher highs on aggressive prints = Bullish**
- **Lower lows on aggressive prints = Bearish**
- **Tip:** If price rises with strong tape, the move has backing.

4. Colour (Depends on platform)

- **Green = Buy at Ask**
- **Red = Sell at Bid**
- **Tip:** **More green** = buyers aggressive. **More red** = sellers aggressive.

5. Refreshing Orders (Hidden Size)

- Same price shows repeated prints of same size = hidden buyer/seller.
- **Tip:** Could indicate a wall being absorbed or stealth accumulation/distribution.

Drill: Tape Reading Habit Builder (10–15 mins per day)

Goal: Build pattern recognition and context awareness from T&S.

What You Need:

- Chart of your preferred
 - Time & Sales window + Level 2 (optional)
 - Notepad or spreadsheet for notes
-

Step-by-Step Daily Tape Drill:

1. **Pick a 15-min window at market or power hour.**
2. **Watch T&S live** without taking trades. Your job: **observe & record notes.**
3. **Write down:**
 - Did speed increase during a breakout?
 - Were big prints supporting or rejecting a key level?
 - Was size being absorbed at the same price (hidden interest)?
 - Was price moving with or against the tape colour?
 - Any fast green tape stalling = fake out or large seller?
4. At the end of the session, answer:
 - What did strong buying/selling *look* like? (Mark it down)
 - What was the **result** (price follow-through, failure, reversal)?
 - Any **repeatable order patterns**?

Mental Models to Build

- “Is price moving **BECAUSE** of the tape or **DESPITE** it?”
- “Are we breaking out with force or leaking up?”
- “Who is more aggressive: buyer or seller?”

Goals for Week 1

Day	Focus	Notes
1	Identify when speed increases	Note what price does after acceleration?
2	Spot large prints	Do they align with breakout/breakdown?
3	Look for refreshing orders	Hidden buyers or sellers (Use DOM as well)
4	Link colour dominance to price	Is price moving in same direction?
5	Watch for traps (fake outs)	Green tape into lower high, etc.

Summary

Use Time and Sales to **feel market intent**

Practice **pattern recognition** with your drill

Avoid overreacting - let price **confirm** tape signals
